

A photograph of a night-time emergency scene. In the foreground, a patient is lying on a red padded stretcher, which is being transported by a paramedic. The stretcher is on a paved surface with yellow and white caution tape visible. In the background, several emergency responders in high-visibility vests and uniforms are gathered around a vehicle, possibly a fire truck or ambulance, with its lights on. The scene is dimly lit by streetlights and the vehicles' headlights.

En résumé

- Besoin d'un carroyage *ad hoc* :
 - car plus facile à la radio que les carroyages officiels
 - car éventuellement oblique
- Problèmes :
 - Réaliser la crashmap
 - Savoir où on est et pouvoir le transmettre facilement
 - Sous contrainte que
 - Réseau GSM pas fiable en évènement / crise
 - Pas toujours un module GPS dans la radio / infra

Principes-clés en techno opérationnelle

- utilisable **sans formation**
- le plus **proche** possible **de ce que les gens connaissent**
- le **moins de manipulations** supplémentaires **possibles**
- utile mais **dont on sait se passer**
(= ne pas remplacer qqch de vital avec une techno compliquée)

Principes-clés en techno opérationnelle

- utilisable sans formation
- le plus proche possible de ce que les gens connaissent
- le moins de manipulations supplémentaires possibles
- utile mais dont on sait se passer (= ne pas remplacer qqch de vital avec une techno compliquée)

SCR / Grille / KML

Définition d'un système de coordonnées de référence local

```
var mycrs = new L.Proj.CRS( "EPSG:999999",
    "+proj=tmerc +lat_0=" + LAT0 + " +lon_0=" + LNG0 +
    "+k=1 +x_0=0 +y_0=0 +ellps=WGS84 +towgs84=0,0,0,0,0,0 +units=m +no_defs");
```

Définition de la grille

```
var cb = Math.cos(b * Math.PI / 180);
var sb = Math.sin(b * Math.PI / 180);

for(y=0; <xlabels.length; ++y)
{
    for(x=0; <ylabels.length; ++x)
    {
        var xy_center = {x:x0 + cb * (i+5) * dx + sb * (j+5) * dy,
                        y:y0 + sb * (i+5) * dx - cb * (j+5) * dy};

        var LL = mycrs.projection.unproject(xy_center);
        ...
        var lat_lngs = [LL_TL, LL_TR, LL_BR, LL_BL, LL_TL];
        G.push(new L.Polyline(lat_lngs, {color: 'darkeray', fillOpacity:0, weight: 1}));
        LG = L.featureGroup(G).addTo(myMap);
    }
}
```

Exportation en KML

```
var json_ = LH.toGeoJSON();
var kml_ = tokml(json_);
```
